#### Junior Odoo Developer

I work as a Junior Odoo Developer, where I develop custom modules and implement business logic to meet the company's ERP requirements. I customize views using XML inheritance and OWL to enhance the Front-End experience, integrate external APIs, and automate server actions. Additionally, I assist in deploying and maintaining Odoo instances on Odoo.sh and collaborate with the team to optimize workflows across Sales, Projects, and Inventory modules.

## Projects

### School Management System

Developed a complete Odoo-based system for managing a private school's subscriptions and services. Enabled parents to subscribe to packages and add extras such as uniforms and books, with defined subscription periods. Built a backend module to track student enrollment, class assignments, subscription status, and payment methods, integrating with CRM, Subscription, Sales, and Accounting modules. The system streamlined operations, improved payment tracking, and enhanced overall administrative efficiency.

### Law Firm Management System

Developed a complete Odoo system for a law firm, including backend modules for client records, case tracking, billing, payments, and document management. Designed a dynamic dashboard with QWeb Reports and Charts to visualize case status, client data, and workflow metrics. Integrated with CRM and Accounting modules, improving operational efficiency and enabling real-time management insights.

## Module Customizations

Performed extensive customizations on multiple Odoo modules including Sale Order, Account Move, Inventory, Purchase, Documents, Survey, Website, Contacts, CRM, Project, POS, and Employees. Implemented business logic, customized views, automated actions, and integrated workflows to optimize operations across different departments.

## Additional Information

- Available for relocation to KSA & UAE
- Experienced with multiple Odoo modules (Sales, Accounting, Inventory, Projects, CRM)
- Skilled in Python, XML, OWL, Front-End, and API integrations
- Developed dashboards and automated workflows for real-time insights
